**WIN THIS POSTER!**

**TAKE SOME EASY ACTIONS TO HELP OUR SOUTHERN RESIDENT ORCAS AND GET A FREE RAIN GARDEN POSTER**

**RAIN GARDEN**

Rain gardens work like a native forest by capturing and infiltrating stormwater from rooftops, driveways, and other hard surfaces. Rain gardens reduce flooding by absorbing water from impervious surfaces; filter oil, grease and toxic materials before they can pollute streams, lakes and bays; help to recharge the aquifer by increasing the quantity of water that soaks into the ground; provide beneficial wildlife habitat.

Species available for the location shown are provided. Other species may be available in other locations. See the list of species for more information. © 2010 WICD
